Introduction:-

The Student Management System is a software application used to manage student records efficiently. It helps store, update, search, and delete student information in a digital format. The system reduces paperwork, saves time, and improves data accuracy, making student record management simple and effective.

Objective:-

To manage student records digitally, including adding, updating, searching, and deleting student information.

Problem Statement:-

Managing student records manually is time-consuming and error-prone. The system provides a digital solution for efficient record management.

Scope of the Processor:

The Student Management System is used to manage student records efficiently. It allows users to add, view, update, delete, and search student information, reducing paperwork and improving data accuracy.

Software Requirements:-

- Python
- MySQL/SQLite
- VS Code or PyCharm
- Windows/Linux

Hardware Requirements:-

- Computer/Laptop
- Minimum 4 GB RAM
- 100 MB Free Storage

Modules:

1. Login/Register – User authentication.
 2. Add Student – Enter student details.
 3. View Students – Display all records.
 4. Edit Student – Update student information.
 5. Delete Student – Remove records.
 6. Search Student – Find students
- Additional Modules for Student Management System
7. 1. ID Card Generation Modul

Generate student ID cards automatically.

8. Email Notification Module

Send emails to students. Notify about admissions, attendance, results, and important announcements.

9. CSV Export Module

Export student data to CSV files.

10. Excel Export Module

Export records to Excel (.xlsx).

11. PDF Report Module

Generate student reports in PDF. Download attendance, marks, and student details.

System Workflow:-

- User logs into the system.
- System verifies login credentials.
- User selects an operation (Add, View, Edit, Delete, Search Student).
- System processes the request.
- Student data is stored/retrieved from the database.
- Results are displayed to the user.
- User logs out of the system

Expected Outcome:-

- Easy student record management
- Faster data retrieval
- Reduced paperwork
- Improved accuracy

Conclusion:

The Student Management System simplifies student data management and improves efficiency for educational institutions.
