Introduction:-

Expense Tracker AI is more than just an expense management application—it's your intelligent financial companion. Built using **HTML, CSS, and JavaScript**, this project combines modern design with the power of Artificial Intelligence to make expense tracking effortless and efficient.

AI-Powered Document Analysis – Simply upload bills, receipts, or expense documents, and the AI automatically extracts and fills expense details for you.

- **Manual Entry Mode** – Prefer entering data yourself? The manual mode gives you complete control over every transaction.
- **Secure Login Interface** – Personalized access ensures that your financial records remain private and organized.
- **Budget Management** – Set spending limits and financial goals to stay on track throughout the month.

- **Interactive Graphs & Analytics** – Visualize your spending patterns through dynamic charts and gain valuable insights into your financial habits.

Objective:-

1. **To revolutionize expense tracking through AI-powered automation, transforming receipts and bills into organized financial records within seconds.**
2. **To empower users with real-time budget control, helping them make smarter financial decisions and achieve their savings goals.**
3. **To eliminate manual data-entry challenges by combining intelligent document analysis with a flexible manual management system.**
4. **To convert complex spending data into powerful visual insights through interactive graphs and analytics for better financial awareness.**
5. **To create a secure, intelligent, and user-centric financial ecosystem where technology simplifies money management for everyone.**

Problem Statement:-

Many people struggle to track their daily expenses because manual record-keeping is time-consuming, error-prone, and often ignored. As a result, they lose control over their spending and fail to manage their budgets effectively. There is a need for a smart and automated solution that can simplify expense tracking, provide financial insights, and help users make better financial decisions.

“Most people know how much they earn, but very few know where their money actually goes.”

Scope of the Project:-

- Enables users to securely manage their personal expenses through a login system.
- Allows both AI-powered receipt analysis and manual expense entry.

- Helps users set monthly budgets and monitor spending limits.
- Provides graphical reports and analytics for better financial understanding.
- Supports smart financial planning by tracking and organizing expenses in one place.

Software Requirements:-

- Python 3.x
- SQLite/MySQL Database
- VS Code or PyCharm
- for Web Application

Hardware Requirements :-

- Computer/Laptop
- Minimum 4 GB RAM
- Windows/Linux Operating System

Modules :-

1. User Module:

- Registration
- Login
- Expenses Management

2. Application Module :

- Manage Money
- Track use of money and Save money with right decision

System Workflow :-

- 1. User Registration/Login**
- 2. Set Budget**
- 3. Add Expense**
- 4. Data Processing**
- 5. Expense Categorization**
- 6. Data Storage**
- 7. Analysis & Visualization**
- 8. Budget Monitoring**
- 9. Reports & Dashboard**
- 10. Smart Financial Decisions**

Expected Outcome :-

Users can easily record and manage their daily expenses.

AI automatically extracts expense details from uploaded receipts, reducing manual effort.

Users gain better control over their budgets and spending habits.

Interactive graphs and reports provide clear financial insights.

The system promotes smarter financial planning and informed decision-making.

Conclusion :-

The Expense Tracker AI successfully simplifies personal finance management by combining Artificial Intelligence, budget tracking, and data visualization into a single platform. By automating expense recording through receipt analysis and providing manual entry options, the system reduces effort while improving accuracy. The graphical insights and budget monitoring features help users understand their spending habits and make better financial decisions. Overall, the project offers a smart, efficient, and user-friendly solution for modern expense management.
