Introduction:-

The Internship Application System is a Python-based application designed to simplify the internship application process for students and administrators. The system allows students to register, view available internships, apply for internships,

and track their application status. Administrators can manage internship postings and review student applications efficiently.

Objective:-

- Help students prepare for aptitude and technical tests.
- Generate interview questions using AI.
- Create professional resumes.
- Track student performance.
- Provide placement-related guidance.

Problem Statement:-

Many students struggle to prepare for campus placements because resources are scattered across different websites. This project provides a single platform for placement preparation.

Scope of the Project:-

- Student registration and login.
- Student Profile Management.
- Resume Building System.
- Aptitude Test Preparation.
- Technical Skill Assessment.
- Performance Notification and Career Guidance.

Software Requirements:-

- Python/PHP
- MySQL Database

- Visual Studio Code
- for Web Application

Hardware Requirements:-

- Computer/Laptop
- Minimum 8 GB RAM
- Windows 10/11

Modules:-

1. Student Registration and Login

- Registration
- Login
- Password reset

2.Profile Management:

- Personal details
- Educational information
- Skills and certificates

3.Resume Builder:

- Create resumes using templates
- Downloads resumes in pdf format
- Update resume anytime

4.Aptitude Test Module:

- Quantitative aptitude questions
- Logical reasoning questions

5.Technical Quiz Module:

- Topic-wise practice tests
- Java, Python, C, DBMS
- Result analysis

6.Admin Module:

- Manage students
- Add questions
- View reports
- Manage placement notification

System Workflow:-

- 1.Student registers and logs in.
- 2.Student completes profile details.
- 3.Student accesses modules such as Resume Builder, Aptitude Tests, Technical Quizzes.
- 4.The system processes the request and stores data in the database.
- 5.Results and performance analysis are generated.
- 6.Admin manages users, questions, and placement notifications.

7.The system helps students prepare effectively for placements.

Expected Outcome:-

PlacementPro AI provides a centralized platform for placement preparation, helping students improve their aptitude, technical knowledge, interview skills, and resume quality, thereby increasing their chances of getting placed successfully .

Conclusion:-

The PlacementPro AI project successfully provides an intelligent and user-friendly platform for placement preparation, enabling students to build confidence, improve skills, and increase their chances of securing job opportunities
